XTREME SCRUMP Sprint 0

Aldas Water, Castillo Luis, López Carolina, Ñauñay Xavier ESCUELA POLITÉCNICA NACIONAL

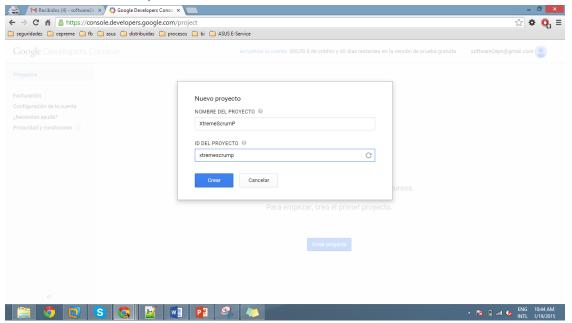

1. Creación cuenta Google

2. Creación del Proyecto

3. Instalación Google Cloud SDK

Para Linux descargamos el Google App Engine SDK a través del comando:

curl https://sdk.cloud.google.com | bash

```
walter@walter-HP-Pavilion-g6-Notebook-PC: ~/Documents
■ walter@walter-HP-Pavilion-g6-Notebook-PC: ~/Documents 108x29
walter@walter-HP-Pavilion-g6-Notebook-PC: ~/Documents$ curl https://sdk.cloud.google.com | bash
 % Total
            % Received % Xferd Average Speed
                                               Time
                                                       Time
                                                                 Time Current

 Welcome to the Google Cloud SDK!
The Google Cloud SDK is currently in developer preview. To help improve the quality of this product, we collect anonymized data on how the SDK is used. You may choose to opt out of this collection now (by choosing 'N' at the below prompt), or at any time in the future by running the following command:

gcloud config set --scope=user disable_usage_reporting true
Do you want to help improve the Google Cloud SDK (Y/n)?
```

```
walter@walter-HP-Pavilion-g6-Notebook-PC: ~/Documents
                             walter@walter-HP-Pavilion-g6-Notebook-PC: ~/Documents 108x29
  Installing: Compute Engine Command Line Tool (depreca...
Creating backup and activating new installation...
 The Google Cloud SDK installer will now prompt you to update an rc
 file to bring the Google Cloud CLIs into your environment.
Enter path to an rc file to update, or leave blank to use
 [/home/walter/.bashrcl:
Modify profile to update your $PATH? (Y/n)? y
Modify profile to enable bash completion? (Y/n)? y
Backing up [/home/walter/.bashrc] to [/home/walter/.bashrc.backup].
[/home/walter/.bashrc] has been updated.
Start a new shell for the changes to take effect.
For more information on how to get started, please visit:
 https://developers.google.com/cloud/sdk/gettingstarted
 alter@walter-HP-Pavilion-g6-Notebook-PC:~/Documents$
Reiniciamos la terminal y usamos el comando:
gcloud auth login
Posterior a esto inicializamos el repositorio de git con el comando:
gcloud init xtremescrump
    ■ ■ walter@walter-HP-Pavilion-g6-Notebook-PC: ~/Documents/Software

```

Agregamos el Proyecto recién creado al repositorio git local con el comando git add xtremescrump. Igualmente realizamos un commit al repositorio local.

Finalmente hacemos un push del Proyecto en la rama origen para que los cambios estén disponibles para todos.

Podemos comprobar que el código se subió correctamente visitando la página del Proyecto.

En la opción de almacenamiento habilitamos la opción cloud storage lo que nos permite utilizar bases de datos NoSQL.

Podemos crear entidades.

Además podemos realizar consultas con lenguaje SQL o ver los datos por cada entidad creada.
